Week 2 Practice Problem Solutions

2. CSV Student Record Parser

Parse a three-field CSV record: Name, RollNumber, Department.

Java Solution

```
public class Main {
    static void parseStudentRecord(String csvLine) {
        String[] fields = csvLine.split(",", -1);
        if (fields.length != 3) {
            System.out.println("Invalid Record");
            return;
        }
        System.out.println("Name: " + fields[0].trim()
                + " | Roll No: " + fields[1].trim()
                + " | Dept: " + fields[2].trim());
    }

    public static void main(String[] args) {
        parseStudentRecord("Ananya Verma,RA2211003010123,CSE");
        parseStudentRecord("Ananya Verma,CSE");
    }
}
```

Sample Output

```
Name: Ananya Verma | Roll No: RA2211003010123 | Dept: CSE
Invalid Record
```

Notes

Exactly three comma-separated fields are required.
